

## **IN THE CLAIMS**

Claims 1 – 13 (Cancelled)

14. (New) A towel attachment device comprising:

a) a first material member having a rectangular shape, wherein said first material member includes an eyelet extending through said first material member positioned at a predetermined distance from a corner of said first member;

b) a carabiner having a C-shaped member and a latch pivotally connected to said C-shaped member wherein said latch is moveable from a first open position to a second closed position, and upon said latch being in said first open position, said C-shaped member passes through said eyelet and further through a recess in an article of clothing of a user thereby securing said towel to the article of clothing; and

c) a second material member connected along a first edge thereof to said first material member, wherein said second material member has a first side and a second side, said second side facing said first material member and is pivotable about said connection to move towards and away from said first material member.

15. (New) The device as recited in claim 14, wherein said connection between said first member and said second member is along substantially a midline of said first member.

16. (New) The device as recited in claim 14, wherein said second member is positioned at a corner of said first member opposite said eyelet.

17. (New) The device as recited in claim 14, wherein said first and second material members form a club cloth for selectively cleaning an object therebetween.

18. (New) The device as recited in claim 14, wherein said second member has a shape substantially similar to said first member and a size smaller than said first material member.

19. (New) The device as recited in claim 14, wherein said second material member is further connected to said first member along a second edge thereof.

20 (New) The device as recited in claim 14, wherein said second material member is a flap.
